DALIBuildings 2.1.4 Release Notes

November 2018

WHAT'S NEW

PRODUCT CHANGES

This build includes the following fixes:

1. Up-graded the DALIBuildings installer (with SQL) to use Microsoft SQL server express 2017 instead of SQL 2008 R2 because the old installer is not supported on Windows 10 anymore.

2. Improved the Emergency Light test report summary to show correct number of total passed units after recapturing the test results.

3. Improved consistency of the emergency fitting test results by adding a 3-times re-try loop to re-poll the fitting reporting failed result.
